

## My Invention

By Deimile Danilaityte

If I could invent anything in the world it would be... I want to make medicine for the people that have cancer and make everyone happy .Try help the homeless and build more houses and hospitals . I will make lower prices in the shops . I will try to stop all the wars in the world and that people will live friendly and happy . Give more money for the waitresses and all the people that try to be paid . I would love to put ramps for the people in the wheel chairs to make it easier to make the people make the entrance and exits . I would like for the world to be healthy and nice to everyone. And I want everyone to support the government and take care of the world so we would barely see trash any where around our streets .
